

HoneyMoney

A simple money app for couples and small businesses. See the shared money clearly, keep personal money private, and let AI help — without the tracking fatigue.

We cut money stress by replacing "watch-every-ringgit" budgeting with a simple system couples can actually stick to.

The Problem We Solve

Money is the #1 source of household conflict, and that stress follows people to work — an estimated ~9 lost productive days per employee per year.

Why today's apps fail

- They feel like your partner is watching every ringgit.
- Typing in every expense is tiring, so people quit.
- They only record the past — they can't warn you early.

The Malaysia gap

- People use many e-wallets: TNG, MAE, GrabPay, ShopeePay.
- Families with irregular income need simple, practical tools.
- No app today is built for Malaysian couples across all these wallets.

Our Solution: The 3-Bucket Method

We connect all your money into one simple map, so the app can look ahead — not just record the past.

3 simple buckets

- Must-pay: rent, bills, essentials
- Future Shield: saves a set % automatically
- Private wallets: personal money, kept private

What the money map does

- Connects income → buckets → spending → goals.
- Spots when you're spending too fast to hit a shared goal — early.
- Nudges you both, without ever showing each other's private wallet.

Product Experience

Easy to add spending, clear insights, and your data stays on your own device.

Adding a spend is easy

- Forward an e-wallet screenshot to a Telegram bot.
- Or scan a receipt / just say it out loud — on your phone.
- No bank link needed to get started.

What you get back

- A dashboard plus six ways to see your money.
- Spending by day, week, and month — with a forecast.
- Works in many languages and currencies.

Architecture and AI Reliability

Stack

- Next.js 16 PWA frontend.
- PocketBase local-first knowledge graph data layer.
- Telegram bot ingestion + API services.

AI you can trust

- Can switch AI providers: Gemini Flash, Groq, or Ollama.
- We track the cost of every AI call.
- Data stays on the user's device — a real privacy (PDPA) story.
- The money map gives a new, fairer way to check reliability — a base for inclusive credit.

Bank connections needed

1

Same design from household to small business

Business Model

Free for families to grow the user base; employers pay to offer it to their staff.

How we grow

- Free for families, who invite other family members.
- Community groups and simple guided setup.
- Our promise: less judgment, more peace of mind.

How we earn

- Employers sponsor seats for their staff's money wellness.
- Offered as a staff wellbeing benefit.
- Start with a grant (Cradle CIP Spark) — no equity given up.

~100%

Very low running cost, so nearly all revenue is profit

Staff

Employers pay for their teams' wellbeing

Open

No one else serves Malaysian couples across all e-wallets

Why This Scales

The product scales

- One system works for a person, a family, or a small business.
- Ready-made templates make setup quick and easy.
- Runs in the web browser — nothing to install.

The costs stay low

- Data lives on the user's device, so we store very little.
- If one AI provider fails, we switch — no lock-in.
- We track AI cost per feature, so spending stays in control.

Impact and Policy Alignment

Real-world impact

- Helps families feel more secure and plan with confidence.
- Less money-driven conflict at home, and less stress carried to work.
- Works for people without full bank access — no bank link needed.

Alignment

- SDG 1: No Poverty.
- SDG 3: Good Health and Wellbeing.
- SDG 8: Decent Work and Economic Growth.
- Supports BNM financial-inclusion agenda + Malaysia MADANI.

Current Status

Already live

- Public app online at honeymoney.app.
- Dashboard, six money views, adding spending, and analytics.
- Admin view of AI usage and costs.

Proof we can build

- A real, honest build history (no backdated code).
- The full journey works: add a spend → get an insight.
- A clear plan for the semi-final and final rounds.

Demo Flow (for 3-minute video)

This sequence matches judging priorities and can be recorded quickly.

Storyboard

- Show e-wallet screenshot input.
- Parse into transaction and bucket assignment.
- Trigger Honey risk insight for shared goal.
- Show dashboard and projection delta.

Upload metadata

- Title: HoneyMoney MAIC Nexus T3 Demo.
- Duration target: 2:15 to 2:50.
- Include live URL and repo in video description.

Team and Ask

Team

- Chua Kia Wah — Business Lead (Malaysian citizen, MyKad)
- Pong Woon Wei — Tech Lead

What we're asking for

- Employers willing to try it with their staff.
- Mentors in fintech and working with regulators.
- Introductions to partners who care about this impact.

Thank You

HoneyMoney helps families plan together without policing each other.
