

HoneyMoney Investor Deck Punch List

Purpose: Refocus the 12-slide MAIC deck on an investable proposition: a free-to-households, privacy-first financial-wellness platform funded by organisations and responsible partnerships—not by selling household financial data.

Use this as a revision checklist, not legal advice. Do not claim regulatory compliance, technical capabilities, user metrics, partner commitments, or financial forecasts unless they are documented and verifiable.

Investor storyline to use throughout

HoneyMoney is free financial-wellness software for Malaysian households. It helps people capture spending, understand cash flow, set goals and build better habits—without bank credentials, subscriptions, surveillance advertising, or sale of identifiable personal financial data.

We monetise trusted distribution and organisation-funded wellbeing programmes, not household financial records. Employers, communities and mission-aligned sponsors fund access and educational delivery; they do not receive individual transactions, receipts, statements, H-Scores or identifiable insights.

Language rules

- Say “free for households”, not “free forever.”
- Say “private by default; sharing by choice”, not “household sees everything.”
- Say “privacy-first” and explain the controls; use “local-first” only if the primary ledger and core processing genuinely remain on-device.
- Say “educational financial-wellness tool”, not “financial adviser,” “financial coach” or “recommendation engine.”
- Say “optional cloud AI” only when an in-product notice and consent control exist.
- Never state that HoneyMoney is “PDPA exempt,” “PDPA compliant,” “secure,” “zero data,” or “no data leaves the device” unless legal/technical evidence supports the exact claim.

Slide-by-slide revision punch list

Slide 1 — Cover

Current issue

- “Happy Wife, Happy Life” can sound gendered and may undermine the privacy/autonomy message for couples and families.
- “AI money layer” can make investors ask whether AI is the product, whether it is regulated advice, and whether it sends financial data to third parties.

Change

- Replace the tagline with one of:
 - **Better money habits, together—on your own terms.**
 - **Free, private financial wellness for Malaysian households.**
 - **Household financial wellness, private by default.**
- Replace “AI money layer” with:
 - **The privacy-first financial-wellness layer for Malaysian households.**
- Retain “AI-assisted” only where it is clearly optional and subordinate to the core budgeting tool.

Investor proof point to add

- A concise one-liner: **Free to households; funded by organisation-sponsored wellbeing programmes and responsible partnerships.**

Slide 2 — The Problem

Current issue

- Strong user problem, but it does not yet show a paying customer problem or why a partner would fund the solution.
- The “traditional apps ... surveillance” statement is broad and difficult to prove.

Change

- Keep fragmented e-wallet/card/cash problem and tracking fatigue.
- Add an organisation-facing pain point:
 - **Employers and community organisations want practical financial-wellness support, but cannot responsibly access an individual’s private financial records.**
- Rephrase the surveillance claim:
 - **Many solutions are either manual and burdensome, or depend on centralised data collection that households may not trust.**
- Ensure the RinggitPlus data point is accurately sourced on-slide or in footnote.

Investor proof point to add

- Put the target user and initial buyer on the slide:
 - User: urban Malaysian household managing multiple payment methods.
 - Buyer: employer wellbeing, community, cooperative, CSR or financial-literacy programme.

Slide 3 — Live App

Current issue

- “Live now” is valuable, but investors need evidence of product readiness and early behaviour, not only screenshots.
- The feature list needs a privacy / reliability boundary.

Change

- Title: Live product, designed for repeat household use.
- Add a small “trust by design” panel:
 - No bank credentials required.
 - Core budgeting works without cloud AI.
 - Private entries and household sharing controls.
 - Export and data controls available or scheduled with a dated milestone.
- Add only verified metrics. Examples of metric labels:
 - households registered
 - activated households
 - week-4 retention
 - average transactions logged in week 1
 - forecast-view rate

Remove unless verified

- Any assertion that “all” records are local, all import data is private, or every feature is ready for production.

Slide 4 — 3-Bucket Method and H-Score

Current issue

- “The household sees the total, only you see your expenditure” needs stronger privacy detail.
- A Health/H-Score could be mistaken for a credit score, affordability result, or regulated recommendation.

Change

- Retitle: **A simple household method—with individual control.**
- Replace current privacy sentence with:
 - **Private by default. Each person chooses which selected items or totals, if any, are shared with the household.**
- Add a H-Score footnote:
 - **H-Score is an educational progress indicator based on user-entered data. It is not a credit score, lending decision, affordability assessment, investment recommendation or guarantee.**
- Add “every point traceable” only if the UI enables the user to see the inputs and calculation logic or a clear explanation.

Investor proof point to add

- Explain why this is defensible:
 - **A couple-aware permission model solves the shared-versus-private tension that spreadsheet workflows do not handle well.**

Slide 5 — Product Experience

Current issue

- Screenshots, receipts and statements can contain highly sensitive practical information and third-party data.
- The forecast example reads like personalised advice unless framed as a user-data estimate.

Change

- Add a short capture safety statement:
 - **Users review imported or scanned items before saving; uploads are processed only for the selected feature.**
- Replace “Sees It Coming” copy with:
 - **Educational cash-flow estimate: “At your current recorded pace, your plan may be short by 24th. Review discretionary dining spending.”**
- Add footnote:

- Forecasts depend on user-entered and imported data; they may be incomplete or inaccurate and are not financial advice.
- Make “No bank link” a clear trust feature, but do not imply no personal data is processed.

Product decisions to resolve before publishing

- Are original images retained after OCR?
- Is OCR fully in-browser in every deployed path?
- Can users delete uploaded originals?
- Does import happen locally or is it uploaded?

Slide 6 — Architecture and AI Support

Current issue

- This is the highest legal/privacy credibility risk in the deck.
- “OCR runs in the browser, zero AI tokens” conflicts or appears confusing beside Gemini Flash, Groq, and hosted AI.
- “Self-hosted,” “single-tenant,” “encrypted,” “no analytics SDKs,” “no data brokers,” and “cost-free AI” are technical assertions investors may diligence.

Change

- Split into two visual lanes: **Core private-by-design workflow** and **Optional AI services**.

Core private-by-design workflow

- Browser/PWA capture and local calculations where available.
- No bank credentials required.
- User-controlled storage, export and sharing.
- No behavioural-ad-network SDKs, if true.

Optional AI services

- User chooses whether to use a cloud-AI provider.
- Only selected content is sent after an in-context notice and consent.
- Local/no-AI core budgeting remains available.
- Provider, use, data and retention terms are disclosed in-app.
- Reword “zero AI tokens” to:
 - Browser-based OCR is designed to avoid cloud-LLM token use.
 - Use this only after confirming that deployed OCR does not transmit image/document data to a third party.

- Delete “Google’s \$300 credit” from the investor deck. It signals temporary subsidy rather than a durable unit-economics plan.
- Replace “cost-free AI calls” with:
 - AI use is optional, usage-controlled and architected to protect unit economics.

Evidence to have in your data room

- Data-flow map, vendor list, cloud/AI request paths, retention settings, server access model, backup model, security controls and cost-per-AI interaction.

Slide 7 — Market and Progress

Current issue

- “Privacy notice, consent controls and one-click export are live” must be removed until the Privacy route works and each control is fully implemented.
- Market size alone does not establish a beachhead or conversion pathway.

Change

- Title: **Beachhead: urban dual-income households through trusted organisations.**
- Keep the market context, but add a bottom-up initial market:
 - number of target employers/community partners
 - average eligible households per partner
 - anticipated annual programme value
- Replace “live” privacy claim with an accurate stage label:
 - **Trust controls in rollout: public privacy notice, purpose-specific choices, export, household permissions and deletion workflow.**
 - Or use: [Feature] live / [Feature] by [month/year] only when it is a real committed delivery plan.
- Add traction table if available: pilots, LOIs, active users, activation, retention, partner pipeline.

Do not claim

- A “couple-aware privacy model” until granular sharing, acceptance, revocation and safe exit are actually live.

Slide 8 — Business Model

Current issue

- This slide is the investor's key concern. "Free households" plus "sponsors and referrals" is incomplete.
- It risks suggesting monetisation of user financial data.

Replace the slide entirely

Title: Free to Households. Funded by Trusted Organisations.

Revenue stream	Paying customer	What they buy	Data boundary
Sponsored household programme	Employers, communities, NGOs, cooperatives, CSR partners	Access, education, onboarding and programme delivery	No individual financial records, receipts, H-Scores or identifiable insights
Direct sponsorship	Mission-aligned brand/organisation	Clearly labelled, non-personalised support of free access	No behavioural targeting or user-data transfer
Optional resource/referral placement	Licensed/trusted partner	Clearly labelled access to a general resource	No profile, transaction or H-Score sharing; user chooses to leave HoneyMoney
Future organisation licence	Employer/community programme owner	Programme administration and privacy-safe aggregate reporting	Suppressed aggregate statistics only; no small-group or individual reporting

Footer:

HoneyMoney does not sell, rent or disclose identifiable household financial records to sponsors, employers, advertisers or referral partners.

Use the footer only after contracts, data access rules, data processing practices and staff workflows enforce the promise.

Pricing clarity

- Define the unit: **RM48 per activated sponsored household per year** or a fixed programme fee.
- Do not show a price that has not been tested as though it is proven.
- State whether activation, onboarding, support and workshops are included.

Slide 9 – Funding Ask and Milestones

Current issue

- Revenue arithmetic is difficult to read and “seats” makes the free-user promise ambiguous.
- The ask needs an investable milestone plan, not only a time horizon.

Change

- Title: **RM150k Pre-Seed: prove repeatable trust-led distribution.**
- State the use of funds in deliverables:
 - **60% Product and trust architecture:** core workflow hardening, household permissions, export/deletion, security, H-Score explanation and AI controls.
 - **25% Partner pilots and customer success:** 3–5 paid pilots, onboarding toolkit and outcome measurement.
 - **15% Company and operations:** incorporation, legal documentation, IP, vendor governance and essential operations.
- Replace all “seat” maths with a transparent scenario table:

Period	Commercial milestone	Illustrative revenue basis
0–12 months	3–5 sponsored pilots / 500 activated households	RM48 per activated household per year, subject to pilot pricing
12–24 months	Repeatable partner channel / 8,000 activated households	Contracted programme revenue, not household subscription revenue
24–36 months	National partners and expansion readiness	Renewal plus new partner contracts

Add measurable milestones

- Partner contracts signed.
- Activated-household target.
- Week-4 and month-3 retention target.
- Sponsor renewal target.
- Gross margin target after support, hosting and AI costs.
- Privacy/security milestones completed.

Slide 10 – Impact, Policy and Trust

Current issue

- Good mission fit, but it currently contains potentially unverified claims: bilingual notice, per-purpose consent and one-click export live.
- “Free forever” creates an open-ended contractual/reputational promise.

Change

- Title: **Impact with Trust: free household tools, private by default.**
- Reframe “Privacy as a design rule” as operational commitments:
 - No bank credentials required.
 - Private entries by default; sharing is an explicit choice.
 - Core budgeting does not require cloud AI.
 - Sponsor and employer data wall.
 - User export, correction, deletion and consent controls.
- Replace “Free forever” with:
 - **Core budgeting and financial-wellness tools are free for household users. We aim to sustain free access through organisation-funded programmes and responsible partnerships.**
- Keep “not a substitute for licensed advice,” and add “not a credit or lending service.”
- Cite every policy/market statistic or remove it.

Add an impact measurement statement

We measure activation, retention, use of budgeting goals, user-reported confidence and programme reach. We do not claim guaranteed savings or financial outcomes.

Slide 11 – Team and Ask

Current issue

- Team capabilities are clear but need stronger credibility around go-to-market, trust governance and execution.
- “AI-award-winning” requires a precise award name/year or should be removed.

Change

- Add evidence-based role descriptions:
 - Business Lead: partner sales, programme design, financial-wellness distribution and governance.
 - Tech Lead: secure PWA, privacy architecture, data controls, AI cost discipline and scalable product delivery.

- Add an advisor gap statement or recruitment plan:
 - Malaysian privacy/consumer/financial-services counsel.
 - Financial-wellness or HR-benefits distribution advisor.
 - Security/privacy engineering advisor.
- Make the ask specific:
 - Seeking RM150k pre-seed capital plus design partners in employer wellbeing, communities and financial literacy.
- Mention pilot partners only as “target partners” unless written commitments exist.

Slide 12 – Closing / CTA

Current issue

- The slide has repeated text and visual duplication, which reduces polish.
- “Scores your monthly money health” and “warns you” should be clearly educational estimates, not financial decisions.

Replace with one simple close

Headline:

Free financial wellness for households. Funded by trust, not surveillance.

Three proof points:

- Capture spending across cash, cards, e-wallets and statements—without bank credentials.
- See clear household cash-flow patterns and educational planning estimates.
- Keep individual financial information private by default; share only what you choose.

Ask:

Raising RM150k to validate 3–5 sponsored pilots, prove partner-led distribution and harden the privacy-first product foundation.

CTA:

Try the live product · Become a design partner · Contact hello@honeymoney.app

Footer disclaimer:

HoneyMoney is an educational financial-wellness tool, not a bank, lender, investment adviser or credit-scoring service.

New slide option: insert after Slide 8 or 10

If you can grow to 13 slides, add this slide. If you must remain at 12, merge it into Slide 8 or Slide 10.

Trust Architecture: Why Households and Partners Can Say Yes

- No bank credentials required
- Private by default; household sharing by explicit choice
- Core budgeting works without cloud AI
- Optional AI is disclosed before use
- No sale of identifiable household financial records
- Sponsors/employers receive no individual financial data
- Export, correction, deletion and sharing-revocation controls
- Educational tool—not regulated financial advice or a credit score

Use only statements which are live or listed as dated roadmap commitments.

Deck-wide evidence and hygiene checklist

Claims and citations

- [] Add source footnotes for the RinggitPlus statistic, DOSM household count, income-earner figure, policy references and all market data.
- [] Add a “Sources and definitions” appendix or one-page data-room reference.
- [] Remove “real build, no backdated code”; it is not an investor benefit unless there is a due-diligence reason.
- [] Replace absolute claims—“always,” “never,” “zero,” “free forever,” “private”—with precise, verifiable wording.
- [] Do not claim PDPA compliance, licence status, awards, sponsors, partner relationships, retention, costs or traction without evidence.

Financial model

- [] Define who pays, price, unit, contract duration, activation definition, renewal assumption and payment terms.
- [] Explain the RM48 unit and whether it is an illustrative or contracted price.
- [] Show expected gross margin including hosting, storage, OCR, AI, support, onboarding and partner sales costs.
- [] Separate grants, sponsorship, referral income and recurring contract revenue.
- [] Include an 18-month runway and monthly burn model in the data room.

Privacy, regulatory and trust readiness

- ☐ Fix /privacy and add public footer plus pre-sign-up links.
- ☐ Publish English and Bahasa Malaysia Privacy Notice reflecting actual data flows.
- ☐ Publish Terms, Financial Education Disclaimer, H-Score Methodology, AI Feature Notice, Household Sharing Notice and Sponsor/Partner Notice.
- ☐ Document on-device versus server processing for each feature.
- ☐ Make cloud AI optional, purpose-specific and disclosed before use.
- ☐ Use a default-private household model with invite acceptance, granular sharing and immediate revocation.
- ☐ Ensure sponsors/employers cannot access individual data at database, interface, export or support-process level.
- ☐ Implement export, correction, account deletion, consent withdrawal and retention/deletion process.
- ☐ Maintain a data-flow map, vendor register, access-control matrix, incident plan and retention schedule.
- ☐ Obtain Malaysian legal review before public claims of compliance or scaled launch.

Investor diligence package

- ☐ 12-slide deck using the revised story.
- ☐ One-page investment memo.
- ☐ Product demo using synthetic data only.
- ☐ Traction dashboard and metric definitions.
- ☐ 18-month operating model and funding milestones.
- ☐ Cap table, incorporation plan, founder equity, IP assignments and vesting.
- ☐ Data room containing privacy/security architecture, vendor register, terms/notices and partner data-boundary templates.
- ☐ A list of 25–50 target design partners, with buyer persona, value proposition, outreach status and expected deal size.
