

HoneyMoney

A personal financial wellness app — AI-supported, no tracking fatigue. Funding transparency and spending autonomy for households and micro-businesses.

We reduce financial stress by replacing surveillance budgeting with a graph-guided system couples can actually sustain.

The Problem We Solve

Money is the #1 source of household conflict, and that stress follows people to work — an estimated ~9 lost productive days per employee per year.

What fails today

- Budget apps feel like partner surveillance.
- Manual entry fatigue leads to abandonment.
- Flat ledgers cannot forecast goal failure early.

Malaysia-specific gap

- Multi e-wallet reality: TNG, MAE, GrabPay, ShopeePay.
- Underbanked and mixed-income households need practical tools.
- No incumbent owns the Malaysia + couples + cross e-wallet cell.

Our Solution: The 3-Bucket Graph Method

A living knowledge graph that converts scattered transactions into forward-looking household decisions.

3 Buckets

- Fixed Non-Negotiables (rent, bills, essentials)
- Future Shield (automatic savings percentage)
- Private wallets (autonomy zone, no surveillance)

Graph intelligence

- Links income -> buckets -> spending -> goals.
- Detects spending velocity risk before goal failure.
- Delivers partner-safe nudges without exposing private wallet details.

Product Experience

Low-friction capture, explainable insights, and local-first privacy.

Capture options

- Forward e-wallet screenshots through Telegram bot.
- On-device OCR and voice capture path.
- No bank integration dependency to start.

User-facing outputs

- Dashboard + six-view graph gallery.
- Time-schedule spending audit and projections.
- Multi-language and multi-currency support.

Architecture and AI Reliability

Stack

- Next.js 16 PWA frontend.
- PocketBase local-first knowledge graph data layer.
- Telegram bot ingestion + API services.

AI strategy & trust

- Swappable providers: Gemini Flash, Groq, Ollama.
- Per-call token and cost ledger for governance.
- Local-first data stays on-device: a real PDPA privacy story.
- Graph-path-consistency: an alternative reliability signal, a foundation for inclusive credit.

Unified data model across household
to SMB

Business Model

Consumer growth loop + employer-sponsored monetization.

Go-to-market

- Free household tier with built-in family referral mechanics.
- Community channels and advisor-led onboarding.
- Positioning: less judgment, more financial calm.

Monetization

- B2B2C employee financial wellness seats.
- Employers sponsor access as wellbeing benefit.
- Non-dilutive entry via Cradle CIP Spark.

Why This Scales

Product scalability

- Single graph model powers household, family, and micro-business use cases.
- Template-driven bucket setup reduces onboarding complexity.
- PWA delivery lowers distribution and support friction.

Operational scalability

- Local-first pattern limits centralized storage burden.
- Multi-provider AI fallback avoids single-vendor lock-in.
- Token ledger enables dynamic cost control per feature.

Impact and Policy Alignment

Direct impact

- Improves household financial resilience and planning confidence.
- Reduces money-driven conflict and stress spillover to work.
- Supports underbanked users through non-bank-dependent capture.

Alignment

- SDG 1: No Poverty.
- SDG 3: Good Health and Wellbeing.
- SDG 8: Decent Work and Economic Growth.
- Supports BNM financial-inclusion agenda + Malaysia MADANI.

Current Status

What is already live

- Public app endpoint: honeymoney.app.
- Dashboard, graph views, transaction flow, analytics surface.
- Admin visibility for AI usage and costs.

Execution credibility

- Genuine non-backdated commit history.
- End-to-end working demo path from capture to insight.
- Clear roadmap through semi-final and final windows.

Demo Flow (for 3-minute video)

This sequence matches judging priorities and can be recorded quickly.

Storyboard

- Show e-wallet screenshot input.
- Parse into transaction and bucket assignment.
- Trigger Honey risk insight for shared goal.
- Show dashboard and projection delta.

Upload metadata

- Title: HoneyMoney MAIC Nexus T3 Demo.
- Duration target: 2:15 to 2:50.
- Include live URL and repo in video description.

Team and Ask
