

HoneyMoney.app

Happy Wife . Happy Life

The AI money layer for Malaysian Families

The Problem

Malaysian households run their money across four or five e-wallets, e.g., TNG, MAE, GrabPay, ShopeePay, plus cards and cash. Nothing adds them up.

Traditional apps answer with manual entry and surveillance, so people burn out and stop. Tracking fatigue is the failure mode, not missing features. For couples: no shared view of what must be paid, and no private space for what should not be.

Not a data problem, but a decision issue. Households find out they overspent after the money is gone. Only 27% of middle-income Malaysians could last six months on savings, down from 32% a year earlier (RinggitPlus RMFLS 2025).

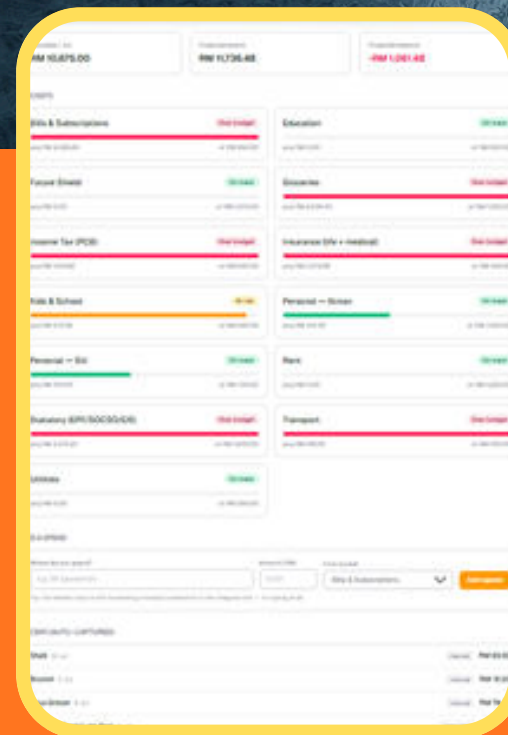

Live Now

LIVE NOW, NOT A CONCEPT

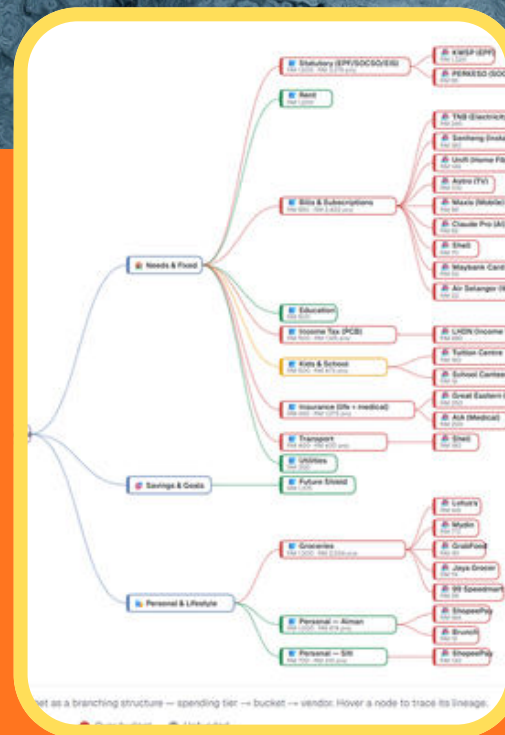

Live App

Public app live at honeymoney.app, a real build, no backdated code

Dashboard

Expenditure by day, week, month and with forecast

Spending

Add by text, scan a receipt or statement import

Analytics

Visual analytics on income versus spending

Tracking

Easy tracking of every expense and record

The 3-Bucket Method

with a Score that Tells You if it Works

Where our money goes

Must-Paid

Rent, bills, and essentials, shared and visible so both partners know what's outstanding.

Savings

Savings Set as a percentage, moved before it can be spent. Security without willpower.

Privacy

Personal money stays private by default, with no explanation needed to household members.

How our money works

Health Score

Building, Steady, Strong, and Thriving: a ladder, not a grade, with every point traceable.

Product Experience

Add a spend in seconds,
share a screenshot, scan a receipt,
photo capture, or import statement.

No bank link.

No forms.

No spreadsheet.

Easy Capture

Capture spendings through
photo-capture, scan receipt,
or import statement.
No bank connection required.

Language & Currency

Multiple languages and
currencies, so every family
member can actually use it,
not just the one who set it up.

Dashboards

Spending by day, week and
month, with forward-looking
forecast built in.

Sees It Coming

The forecast doesn't just
report. It warns: "Short by
the 24th at this pace, RM120
less on dining fixes it."

Architecture & AI-Support

A USER-FRIENDLY PERSONAL-FINANCE APP, BUILT ON A HOUSEHOLD KNOWLEDGE GRAPH.

1

LAYER 1

Next.js Progressive Web App

Lightweight front end that works on any device.
Nothing to install.

2

LAYER 2

PocketBase knowledge graph

Self-hosted and single-tenant.
No analytics SDKs, no data brokers. Credentials encrypted; append-only hash-chained ledger.

3

LAYER 3

On-device capture

Screenshots, receipts, CSV statements. OCR runs in the browser, zero AI tokens. Six languages, multi-currency.

4

LAYER 4

Switchable AI

Gemini Flash, Groq, or local Ollama — and any model it hosts, including DeepSeek and Qwen. Cost tracked per call. No vendor lock-in.

A user-friendly personal-finance app, built on a household knowledge graph for all user-verified inputs.

Cost-free AI calls within free-tier limits to start, e.g. Google's \$300 credit.

Market & Progress

Market Size:

8.2 million Malaysian households (DOSM, 2024), averaging 1.8 income earners each, so shared-versus-private money is the norm, not a niche. We start with: urban dual-income couples, where the friction is daily.

Gap:

Existing tools sit at one of two extremes: bank apps that see only their own bank, or spreadsheets that see everything but demand discipline nobody sustains.

Where We Sit:

The daily-use of every wallet, with a couple-aware privacy model that a bank-owned app structurally cannot offer.

Progress:

A real, usable honeymoney.app, not a prototype. AI-supported, and we know what each request costs. Privacy notice, consent controls and one-click export are live.

Business Model

Strategy & Growth

Free for households, forever, 3-bucket tracking, Money Health Score, forecasts.

This is the acquisition engine, not a trial, a user friendly personal budgeting tool.

Revenue

Budgeting goals and insights, as a service.

Employers sponsor seats like health cover; households never pay, premium optional.

Employers see trends, never records.

Sponsorship and opt-in licensed referrals later.

Development Roadmap

Pilot Phase 1 (month 0-12)

- 1,500 households soft-launch, target 500 seats
- Early retention KPIs

Scale Phase 2 (month 12-24)

- National rollout, 15k household, target 8k seats
- Revenue from sponsored seats + premium

Expand Phase 3 (month 24-36)

- ASEAN B2B market, 45k household, target 30k seats
- High-value fintech

The Ask

We are raising RM150k to fund 18 months of runway, taking us from a live product with targets below:

500 seats x RM48 = RM24k (1st Yr);

8,000 seats x RM48 = RM384k (2nd Yr);

30,000 seats x RM48 = RM1.44mil. (3rd Yr)

Use of funds: 60% engineering · 25% Employee · 15% Sdn Bhd Incorporation & Expenses.

Drivers & Impact

National Agenda

Household financial resilience sits inside the MADANI cost-of-living agenda and Bank Negara's financial literacy priorities. A tool for the behaviour those policies ask for, not a substitute for licensed advice.

SDG Alignment

SDG 1 (No Poverty), an emergency buffer built by rule, not willpower. SDG 8 (Decent Work), financial stress follows people to work; sponsored seats treat it as a workplace issue.

Privacy as a design rule

No bank credentials, ever. Receipt scanning runs on-device. Live today: a bilingual PDPA notice, per-purpose consent, and one-click export. Alignment with PDPA 2010, not certified compliance, no audit yet.

Who it reaches

Free forever means the households under most cost-of-living pressure are not the ones priced out. Six languages, and a phone-first PWA that installs on hardware families already own.

Our Team - JUST50

Drives business strategy, partnerships, and growth. Focused on making HoneyMoney.app the go-to expenditure tracking app for Malaysian consumers, couples and families.

Chua Kia Wah

Business Lead | Malaysian Citizen

Architects the platform, from the household knowledge graph to AI integrations and supporting features, while keeping the system lean and resilient. AI-award-winning Tech Lead.

Pong Woon Wei

Tech Lead | Full-Stack & AI Engineer

- Pilot partners: employers and community groups offering HoneyMoney as a wellbeing benefit
- Licensed fintech partners for the Year 3 referral layer
- Impact-driven investors

What We're Looking For

Contact: hello@honeymoney.app

HoneyMoney.app

Happy Wife . Happy Life

The AI money layer for Malaysian Families

Problems:

- Fragmented, messy household money management for consumers, couples, and families.
- Overspending gets discovered after the fact.

Solutions:

- One app that captures every spend in seconds, scores your monthly money health, and warns you before you run short, without ever connecting to your bank.
- Live now at honeymoney.app!

TRY IT LIVE
