

HoneyMoney.app

Happy Wife . Happy Life

The AI money layer for Malaysian Families

MAIC Nexus 2026 | Track T3

The Problem

Malaysian households run money across four or five e-wallets — TNG, MAE, GrabPay, ShopeePay — plus cards and cash. Nothing adds them up.

Traditional apps answer that with manual entry and surveillance, so people burn out and stop.

Tracking fatigue is the failure mode, not missing features. For couples it is worse: no shared view of what must be paid, and no private space for what shouldn't be shared.

The result is not a data problem. It is a **decision problem**. Households find out they overspent after the money is gone.

Live Now

LIVE NOW, NOT A CONCEPT

Live App

Public app live at honeymoney.app — a real build, no backdated code

Dashboard

Expenditure by day, week and month — with forecast

Spending

Add by text, receipt scan, or a Telegram forward

Analytics

Visual analytics on income versus spending

AI Tracking

Admin view tracking every AI call and its cost

The 3-Bucket Method

with a Score that Tells You if it Works

Where our money goes

Must-Paid

Rent, bills, essentials. Shared and visible to both partners, so nobody has to guess what is still outstanding this month.

Savings

Set as a percentage and moved before it can be spent. Security without willpower.

Privacy

Personal money stays personal. No tracking, no judgment, no exceptions.

How our money works

Health Score Building · Steady · Strong · Thriving — a ladder, not a grade, and every point traceable down to the records behind it.

Product Experience

”

Add a spend in seconds,
forward a screenshot,
or scan a receipt.
No bank link.
No forms.
No spreadsheet.

Easy Capture

Forward an e-wallet screenshot to the Telegram bot, or scan a receipt with on-device OCR that spends no tokens at all.
No bank connection required.

Language & Currency

Six languages and multiple currencies, so every family member can actually use it — not just the one who set it up.

Dashboards

Spending by day, week and month, with a forward-looking forecast built in.

Sees It Coming

The forecast doesn't just report. It warns: “Short by the 24th at this pace — RM120 less on dining fixes it.”

Architecture & AI-Support

1

LAYER 1

Next.js Progressive Web App

Lightweight front end, works on any device, nothing to install.

2

LAYER 2

PocketBase knowledge graph

Self-hosted and single-tenant on our own instance — no analytics SDKs, no data brokers, and no third party in the data

3

LAYER 3

Telegram Bot + API

Screenshots and receipts. Multilingual, multi-currency. No bank connection needed.

4

LAYER 4

Switchable AI

Gemini Flash, Groq, or local Ollama — chosen per deployment. Cost tracked per call. No vendor lock-in.

Honey does not do the arithmetic. Every figure a user sees is computed by the same function behind the H-Score, then each number in the model's prose is checked against that allowlist — **one invented figure discards the whole answer** in favour of a deterministic template.

Market & Traction

Market size

8.2 million Malaysian households (DOSM, 2024), averaging **1.8 income earners** each — so shared-versus-private money is the norm, not a niche. Beachhead: urban dual-income couples, where the friction is daily.

Gap

Existing tools serve one of two ends: bank apps that see only their own bank, or spreadsheets that see everything but demand discipline nobody sustains.

Where we sit

The daily-use layer across every wallet, with a couple-aware privacy model that a bank-owned app structurally cannot offer.

Evidence today

A working public build at honeymoney.app; the AI pipeline running with per-call cost tracking; a household ledger with backup and restore proven end to end. **[Pilot numbers — users, weekly active, retention — to be filled from the pilot before submission.]**

Business Model

Strategy & Growth

Free for households, forever: 3-bucket tracking, the Money Health Score and forecasts. That is the acquisition engine, not a trial — a budgeting tool people abandon earns nothing at any price.

Revenue

B2B2C employee financial wellness. Employers sponsor seats as a benefit; households never pay to keep tracking. A premium plan serves households who want more. Licensed-partner referrals come later — opt-in, off by default, withdrawable in one tap, and only ever a score band, never records.

Development Roadmap

Pilot Phase 1 • 0–12 mth

- 1,000-household pilot, target **500 sponsored seats**
- Early retention KPIs

Scale Phase 2 • 12–24 mth

- National rollout to **50,000 users**, target 8,000 seats
- Revenue from employer sponsorship + premium

Expand Phase 3 • 24–36 mth

- ASEAN B2B market, target **30,000 seats**
- High-value fintech partnerships

The Ask

We are raising **RM150k** for 18 months of runway, from a live product toward the seat targets above — at RM48 per seat per year: **$500 \times \text{RM48} = \text{RM24k}$** (Yr 1) · **$8,000 \times \text{RM48} = \text{RM384k}$** (Yr 2) · **$30,000 \times \text{RM48} = \text{RM1.44m}$** (Yr 3).

Use of funds: 60% engineering · 25% people · 15% Sdn Bhd incorporation and expenses.

Malaysia Fit & Impact

WHY THIS MATTERS HERE, AND TO WHOM

National agenda

Household financial resilience sits squarely inside the **MADANI** cost-of-living agenda and **Bank Negara Malaysia's** financial literacy priorities. HoneyMoney is a tool for the behaviour those policies ask for, not a substitute for licensed advice.

SDG alignment

SDG 1 (No Poverty) — an emergency buffer built by rule rather than willpower. **SDG 8 (Decent Work)** — financial stress follows people to work; employer-sponsored seats treat it as the workplace issue it is.

Privacy as a design rule

No bank credentials are ever requested, and the default receipt scan runs on-device with Tesseract — no image leaves the phone to be read. A receipt you choose to attach is kept with its record, and you can delete it. Consistent with **PDPA 2010**; described as alignment, not certified compliance, because no audit has been done.

Who it reaches

Free forever for households means the people under the most cost-of-living pressure are not the ones priced out. Six languages, and a phone-first PWA that installs on hardware families already own.

Our Team — JUST50

”

Drives business strategy, partnerships and growth. Focused on making HoneyMoney.app the go-to expenditure tracking app for Malaysian consumers, couples and families.

Chua Kia Wah

Business Lead · Malaysian Citizen

”

Architects the platform, from the household knowledge graph to the AI integrations, while keeping the system lean and resilient. AI-award-winning Tech Lead.

Pong Woon Wei

AI Tech Lead · Full-Stack & AI Engineer

- *Pilot partners: employers and community groups offering HoneyMoney as a wellbeing benefit*
- *Licensed fintech partners for the Year 3 referral layer*
- *Impact-driven investors*

What We're Looking For

hello@honeymoney.app

Why HoneyMoney.app

Problem statement

Fragmented, exhausting household money management for consumers, couples and families. Overspending gets discovered after the fact.

Our solution

One app that captures every spend in seconds, scores your monthly money health, and warns you before you run short — without ever connecting to your bank. **Live now at honeymoney.app.**
