

HoneyMoney.app

Happy Wife . Happy Life

The AI money layer for Malaysian Families

MAIC Nexus 2026 | Track T3

The Problem

Malaysian households run money across four or five e-wallets — TNG, MAE, GrabPay, ShopeePay — plus cards and cash. Nothing adds them up.

Traditional apps answer with manual entry and surveillance, so people burn out and stop.

Tracking fatigue is the failure mode, not missing features. For couples: no shared view of what must be paid, and no private space for what shouldn't be.

Not a data problem — a **decision problem**. Households find out they overspent after the money is gone.

Only **27%** of middle-income Malaysians could last six months on savings — down from 32% a year earlier. RinggitPlus

Live Now

LIVE NOW, NOT A CONCEPT

Live App

Public app live at honeymoney.app — a real build, no backdated code

Dashboard

Expenditure by day, week and month — with forecast

Spending

Add by text, receipt scan, or statement import

Analytics

Visual analytics on income versus spending

Tracking

Easy tracking of every expense and record

The 3-Bucket Method

with a Score that Tells You if it Works

Where our money goes

Must-Paid

Rent, bills, and essentials — shared and visible, so both partners know what's outstanding.

Savings

Set as a percentage and moved before it can be spent. Security without willpower.

Privacy

Personal money stays private by default — no explanation needed to household members.

How our money works

Health Score Building · Steady · Strong · Thriving: a ladder, not a grade, with every point traceable.

Product Experience

”

Add a spend in seconds,
share a screenshot, scan a receipt,
photo capture, or import statement.
No bank link.
No forms.
No spreadsheet.

Easy Capture

Capture spending through photo, receipt scan, or statement import. **No bank connection required.**

Language & Currency

Multiple languages and currencies, so every family member can actually use it — not just the one who set it up.

Dashboards

Spending by day, week and month, with a forward-looking forecast built in.

Sees It Coming

The forecast doesn't just report. It warns: “Short by the 24th at this pace — RM120 less on dining fixes it.”

Architecture & AI-Support

A user-friendly personal-finance app, built on a household knowledge graph.

1

LAYER 1

Next.js Progressive Web App

Lightweight front end, works on any device, nothing to install.

2

LAYER 2

PocketBase knowledge graph

Self-hosted, single-tenant, no analytics SDKs. Credentials encrypted; append-only hash-chained ledger.

3

LAYER 3

On-device capture

Receipt OCR in the browser, zero tokens. Six languages, multi-currency. No bank connection.

4

LAYER 4

Switchable AI

Gemini Flash, Groq, or local Ollama — and any model it hosts, including DeepSeek and Qwen. Cost tracked per call. No vendor lock-in.

Honey never does the maths. Our code works out every figure — Honey only puts it into words. Before you see an answer, we check every number in it against what the code produced. **If even one was made up, we throw the whole answer away** and show a plain, pre-written one instead.

Market & Progress

Market size

8.2 million Malaysian households (DOSM, 2024), averaging **1.8 income earners** each — so shared-versus-private money is the norm, not a niche. Beachhead: urban dual-income couples, where the friction is daily.

Gap

Existing tools serve one of two ends: bank apps that see only their own bank, or spreadsheets that see everything but demand discipline nobody sustains.

Where we sit

The daily-use layer across every wallet, with a couple-aware privacy model that a bank-owned app structurally cannot offer.

Progress

A real, usable app at honeymoney.app — not a prototype. The AI works, and we know what each request costs. Data is backed up off-machine every day. A bilingual privacy notice, per-purpose consent and one-click export are all live. User numbers come with the pilot.

Business Model

Strategy & Growth

Free for households, forever — 3-bucket tracking, Money Health Score, forecasts. This is the acquisition engine, not a trial: a user-friendly personal budgeting tool.

Revenue

Budgeting goals and insights, as a service. Employers sponsor seats like health cover; households never pay, premium optional. Employers see trends, never records. Later: sponsorship and opt-in licensed referrals.

Development Roadmap

Pilot Phase 1 (month 0–12)

- 1,500-household soft-launch, target **500 sponsored seats**
- Early retention KPIs

Scale Phase 2 (month 12–24)

- National rollout, **15,000 households**, target 8,000 seats
- Revenue from sponsored seats + premium

Expand Phase 3 (month 24–36)

- ASEAN B2B market, **45,000 households**, target 30,000 seats
- High-value fintech partnerships

The Ask

We are raising **RM150k** to fund 18 months of runway, taking us from a live product toward the seat targets above — at RM48 per seat per year: **500 × RM48 = RM24k** (Yr 1) · **8,000 × RM48 = RM384k** (Yr 2) · **30,000 × RM48 = RM1.44m** (Yr 3).

Use of funds: 60% engineering · 25% people · 15% Sdn Bhd incorporation and expenses.

Drivers & Impact

WHY THIS MATTERS HERE, AND TO WHOM

National Agenda

Household financial resilience sits inside the **MADANI** cost-of-living agenda and **Bank Negara's** financial literacy priorities. A tool for the behaviour those policies ask for — not a substitute for licensed advice.

SDG Alignment

SDG 1 (No Poverty) — an emergency buffer built by rule, not willpower. **SDG 8 (Decent Work)** — financial stress follows people to work; sponsored seats treat it as a workplace issue.

Privacy as a design rule

No bank credentials, ever. Receipt scanning runs on-device. Live today: a **bilingual PDPA notice**, **per-purpose consent**, and one-click export. Alignment with **PDPA 2010**, not certified compliance — no audit yet.

Who it reaches

Free forever means the households under most cost-of-living pressure are not the ones priced out. Six languages, and a phone-first PWA that installs on hardware families already own.

Our Team — JUST50

”

Drives business strategy, partnerships and growth. Focused on making HoneyMoney.app the go-to expenditure tracking app for Malaysian consumers, couples and families.

Chua Kia Wah

Business Lead · Malaysian Citizen

”

Architects the platform, from the household knowledge graph to AI integrations and supporting features, while keeping the system lean and resilient. AI-award-winning Tech Lead.

Pong Woon Wei

Tech Lead · Full-Stack & AI Engineer

- *Pilot partners: employers and community groups offering HoneyMoney as a wellbeing benefit*
- *Licensed fintech partners for the Year 3 referral layer*
- *Impact-driven investors*

What We're Looking For

hello@honeymoney.app

Thank you

Problems

Fragmented, exhausting household money management for consumers, couples and families. Overspending gets discovered after the fact.

Solutions

One app that captures every spend in seconds, scores your monthly money health, and warns you before you run short — without ever connecting to your bank. **Live now at honeymoney.app.**
